

Mezzanine Gate

The Horizontal Sliding Gate and the Vertical Lift Gate are designed to be durable and productive. Provides the same protection as your railing systems and meets federal OSHA requirements for standard railings.

Horizontal Sliding Gate

- Easily slides open and closed.
- Available for openings ranging from 4' to 16'.
- Gates are 42" high, with one mid-rail and 4" toeboard.
- Powder Coated Safety Yellow.
- Manual or Electrically operated (Additional Cost).
- Gate can be ordered to open either direction.
- Can be installed on either side of the handrail.

Vertical Sliding Gate

- Available for openings ranging from 4' to 14'.
- 42" Tall at top of rail.
- Powder Coated Safety Yellow.
- Manual or Electrically operated (Additional Cost).
- Ideal for overhead doors and mezzanines.
- Great visibility to prevent accidents.

Manufactured to specific width requirements.

Factory welded steel framework.

Easy installation.

Mezzanine Gate

Pallet Safety Gate

Simply forklift your pallet of material through the self closing pallet gates and back away. The gates close up against your material effectively protecting the mezzanine edge until the material is loaded or the pallet is removed from the opening. Then the gates spring closed, all the time protecting the opening.

The gates are closed by three stainless steel torsion springs securely mounted within the hinge assembly. The impact bumpers protect your material from being damaged while pushing through the gates.

The adjustable cross bar provides both a visual barrier and a grab surface for added safety.

- Standard sizes 60" or 72" opening width and clear height up to 84".
- Three springs per gate, housed.

Pivot Gate

- All-Welded tubular steel construction.
- Unit ships assembled or knocked down.
- Easily pivots to up or down position.
- Made to accommodate one or two standard skids.
- Powder coated safety yellow.
- Gate can be made to fit each individual application.
- Meets OSHA 1910.23 requirements.
